

ULTRA GUARD

Ultra Guard is totally water soluble, organic product of potassium phosphites for the control of *Phytophthora* sp., *Phytium* sp. and downy mildew.

BENEFITS

Ultra Guard are used as a soil application (through irrigation system) for any crop and at any time of the growth cycle of *Phytophthora* sp., *Phytium* sp. pathogens, e.g. Macadamia nuts, citrus, avocados and pecan nuts trees, as well as downy mildew, e.g. grapes and vegetables.

SOIL APPLICATION

**Any application must be verified with a certified Terra Dynamics expert.*

General soil application in badly infected trees, as well as where root rot appears a single dosage of 200ml per tree of Ultra Guard, followed by a monthly application of 50ml per tree. A soil application of 50 ml per tree in March and October can be applied in lightly infected nut trees.

Infected citrus trees can use a general soil application of 15 liters per hectare approximately twice a year.
